Cheapest Washing You Ever Did

One cent an hour for washing and wringing. That's the average cost for current. Sometimes it's less than that. And this machine really washes. It doesn't merely "swash" the clothes around in a mass. Its backward and forward motion thereby mixes the sads with the clothes-every inch of them—and the result is a clean, white, sweet-smelling washing. You don't have to hand-rub a suitch. It never harms the finest laces. The dolly and interior walls are entirely free from anything that would catch the smallest thread

Saves Time and Labor

It washes in but a mere fraction of the time required by a hand washer; and so makes washing an ordinary task. Easy to operate. Just screw the plug into your light socket, turn the switch and there you are. Always ready. Cost stops when it does. Electric mechanism and gears entirely enclosed. Has castors and ball bearings,
